

BRASS LOCK NUT

Product Catalog

BRASS LOCK NUT

Brass Male Bush

Brass Lock Nuts are high-quality fastening components designed for secure and reliable connections in electrical and mechanical applications. Made from durable brass, these lock nuts offer excellent corrosion resistance and conductivity, making them ideal for use in humid or corrosive environments. With precision threading and a sturdy build, they prevent loosening due to vibration, ensuring a stable and secure fit. Commonly used in electrical enclosures, conduits, and threaded fittings, brass lock nuts are a reliable choice for industrial, commercial, and residential applications.

Features

- Made from corrosion-resistant brass for long-lasting durability
- Excellent electrical conductivity, ideal for electrical connections
- Precision threading ensures a secure, tight fit
- Prevents loosening from vibration or mechanical stress
- Suitable for use in harsh environments, including humid or corrosive conditions
- Available in a variety of sizes to suit different fittings

Specifications

- Material: Brass
- Thread Size: Metric and imperial options available
- Corrosion Resistance: High, suitable for outdoor and marine environments
- Temperature Range: -40°C to 150°C
- Standard Compliance: RoHS, ISO
